

**absidion™ foundation** is an eGovernment solution for municipalities or foundations, who process, assess and finance grants or cases for projects. For customers who manage and oversee projects and seek an overall solution that can be easily embedded into existing structures. ascaion ag is an expert on all matters of cultural and education management.

## absidion™

With the new release of **absidion™ foundation** ascaion offers by far the most modern cultural management solution in Europe. Mobile, web-based and commanding all function areas that a modern system needs - CRM, Project and Case Management, Finance as well as Reporting and BI. Of course, **absidion™ foundation** can be embedded easily into existing environments and uses the appropriate interfaces. This is equally the case for SAP or comparable systems.

# Architecture

One of the most crucial and unique features of **absidion™ foundation** is its cross-structural client architecture. So with **absidion™** it is possible to involve all cultural partners at home and abroad in the processes of case filing, decision and implementation.

The processes in **absidion™ foundation** are more supported by assistants in the compilation of cases, dues or payments, in standard correspondence and in other areas.

Proposers can compile their cases directly through a feeder system. This reduces the effort on administration and makes the process more streamlined.
